

GREENJAY

A Single Standard of Continuity.

The True Objective of Protection is Uninterrupted Life.

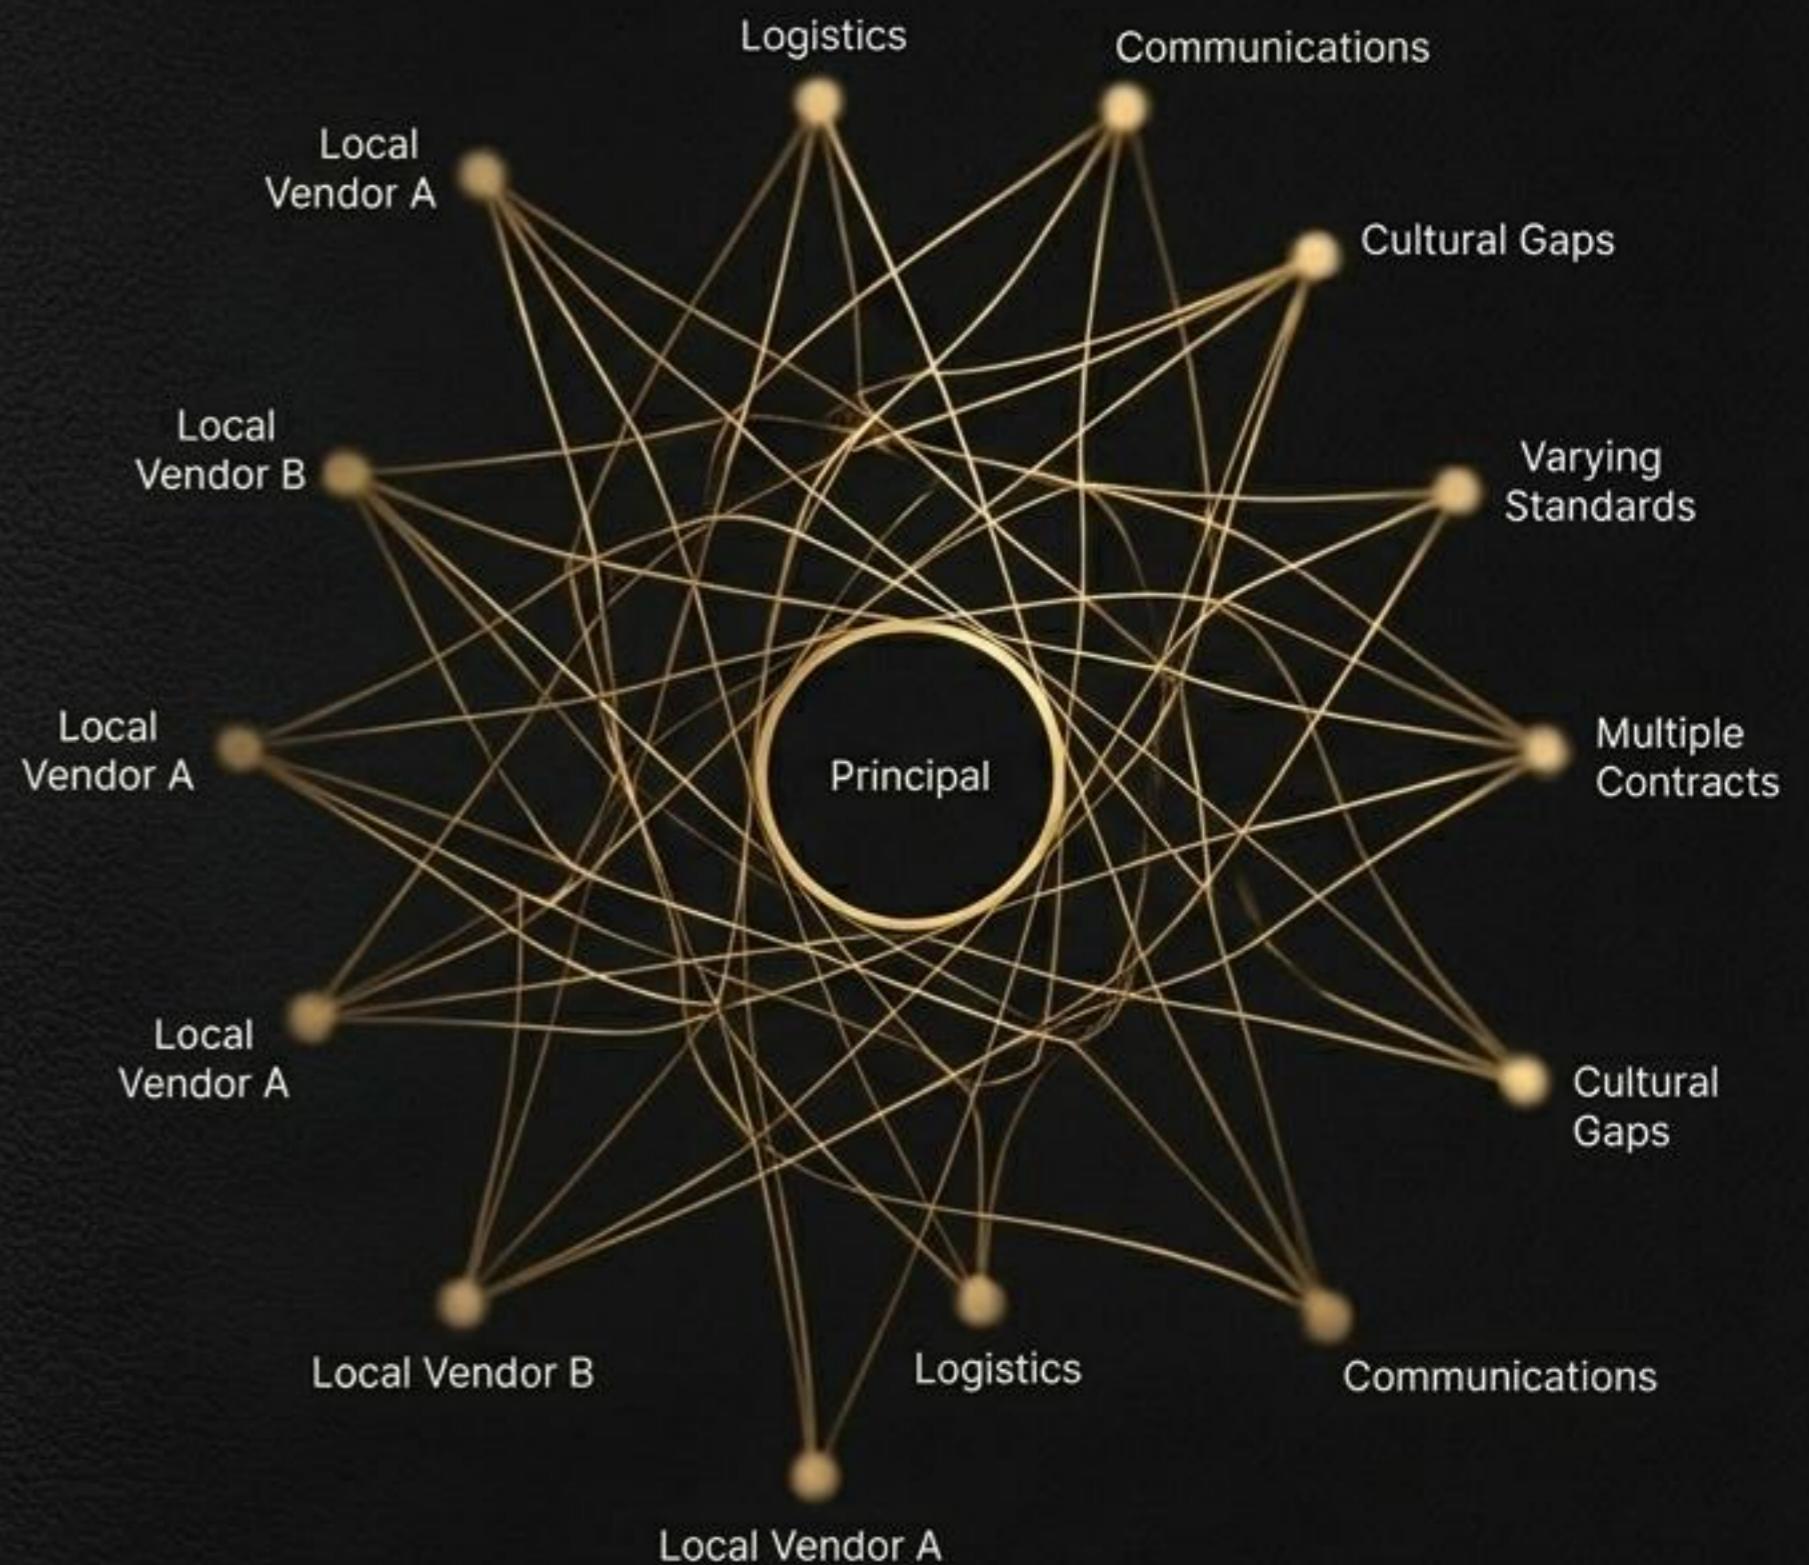

For our clients, the purpose of global protection is not visible security. It is the freedom to live, work, and travel without friction or interruption. It is privacy preserved, movement without exposure, and confidence without disruption.

Traditional security focuses on threat. The superior standard focuses on continuity.

The Burden of Global Complexity: The UHWN Coordination Tax.

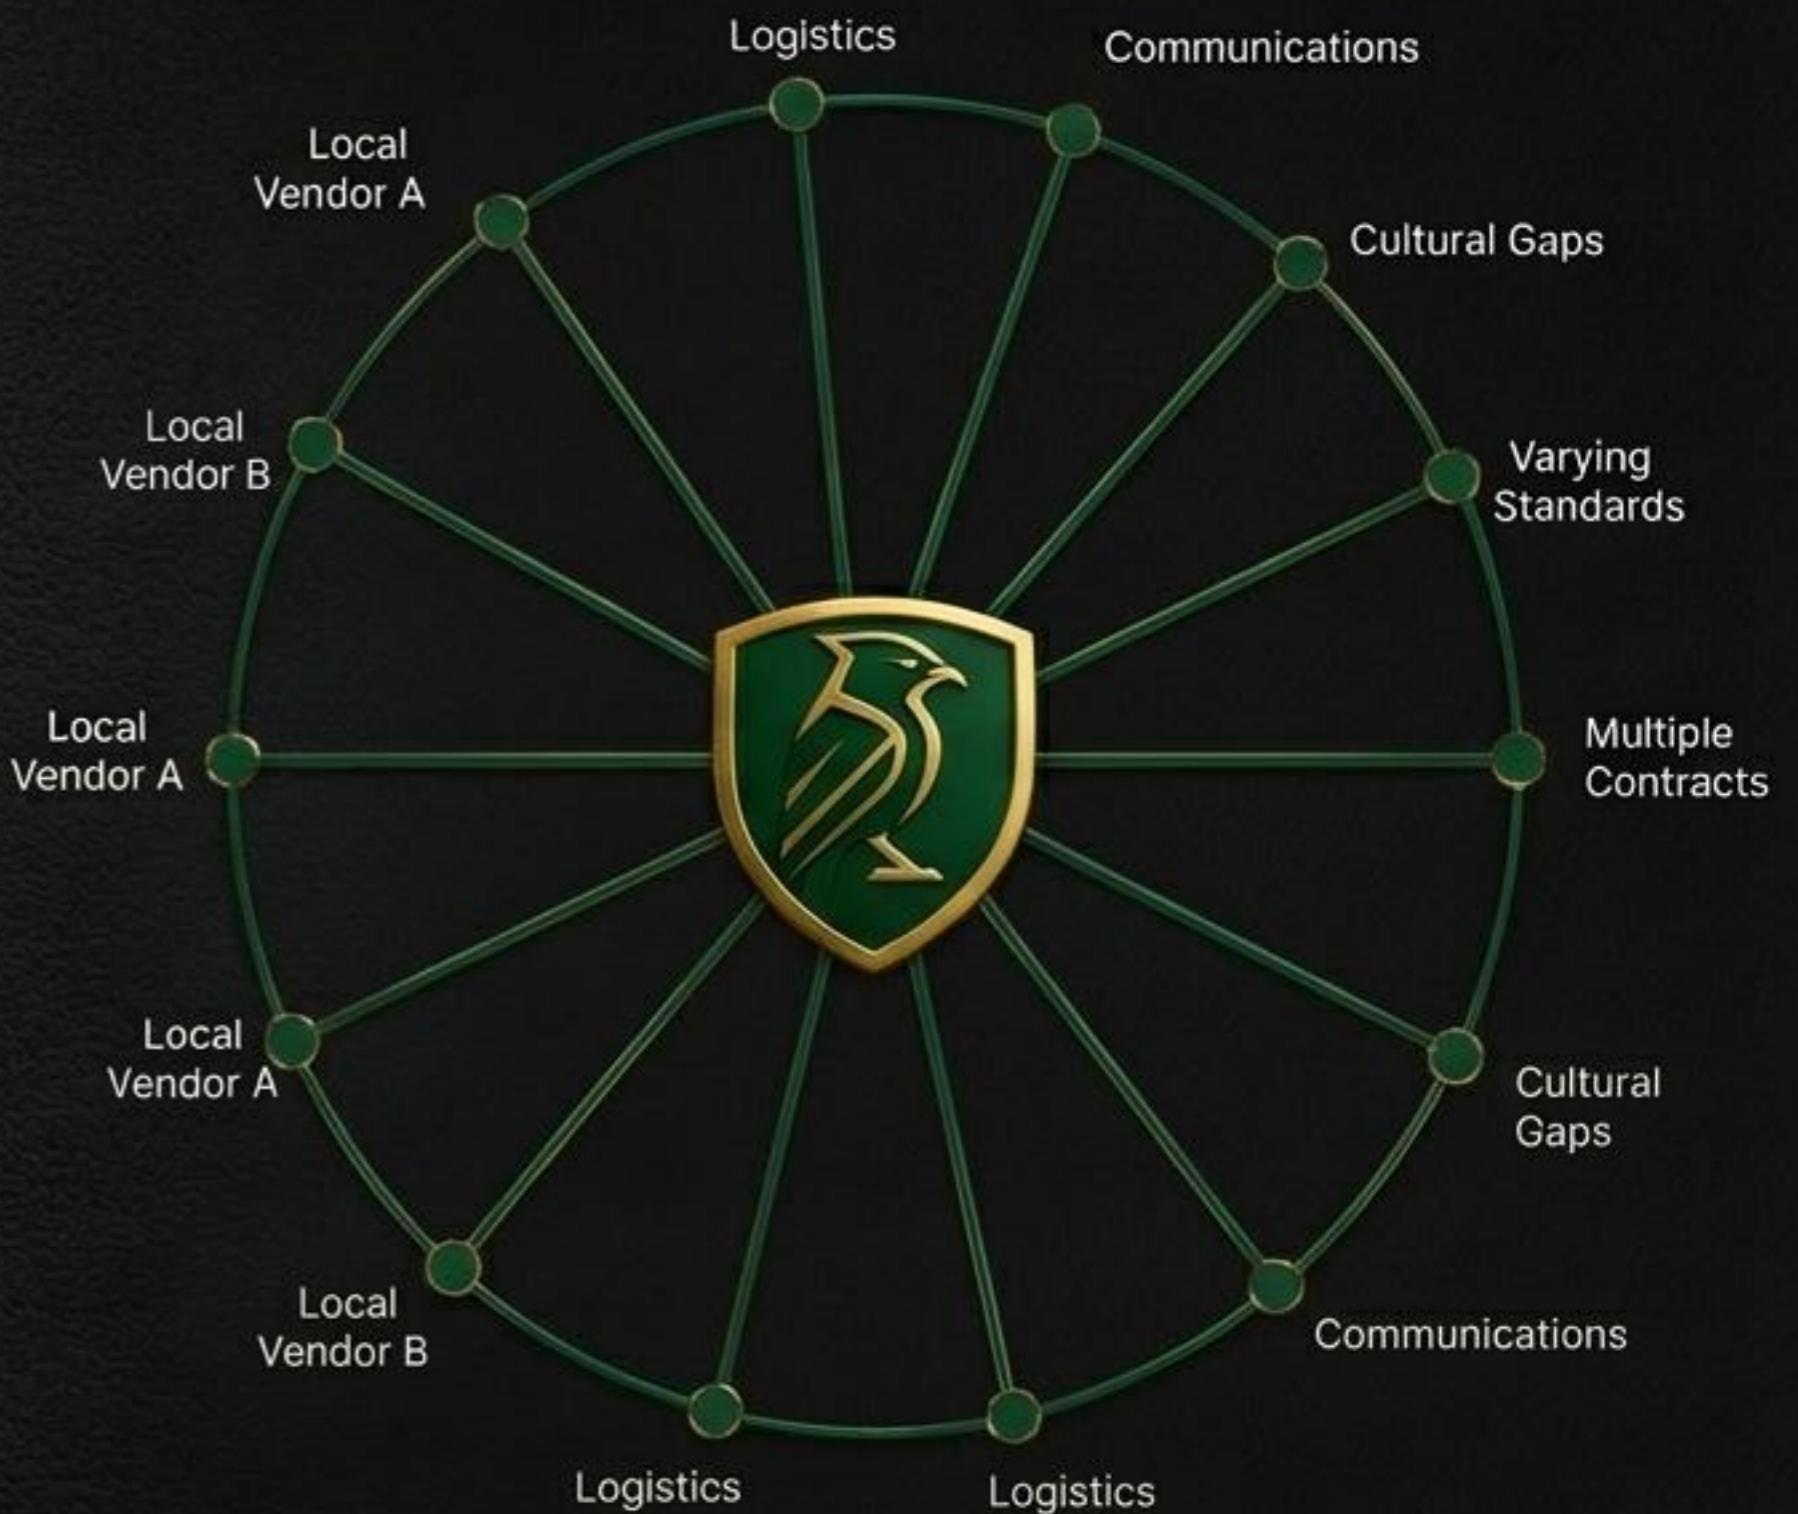

International movement changes the nature of risk. Assumptions about infrastructure, laws, and provider quality collapse across borders. In this fragmented landscape, a new burden emerges: the principal becomes the coordinator. Multiple vendors, multiple contracts, and multiple standards create a patchwork program. The client ends up managing the very complexity they hired protection to eliminate. This is the coordination tax—a friction that disrupts focus and undermines the purpose of the engagement.

Our Role: The Systems Integrator of Protection.

GreenJay is built around a single idea: the principal should not have to “solve” the country. We operate globally as a systems integrator of protection.

We do not simply provide personnel; we engineer an operating condition. By integrating governance, intelligence, and technology, we transform a patchwork of services into a single, coherent protective framework. The result is not louder security, but calmer execution.

A Unified Framework for Global Continuity.

Our model integrates four critical disciplines into one accountable standard.

GOVERNANCE

A single point of accountability that owns the entire picture.

We manage the complexity quietly so the client does not have to.

INTELLIGENCE & VALIDATION

Proactive, intelligence-led planning that reduces uncertainty *before* the client moves, creating situational advantage.

INTEGRATED TECHNOLOGY

The invisible electronic layer that modernizes protection, ensuring communications integrity and reducing digital exposure.

STANDARDIZED EXECUTION

A consistent standard of personnel, discretion, and operational discipline, ensuring a coherent experience across all environments.

Governance: The Difference is Accountability.

UHNW clients want the best outcome: stability, privacy, and freedom of movement. That outcome requires governance.

GreenJay's global approach is led and governed by the firm—not delegated to a rotating cast of vendors. We assume full responsibility for the program's performance. Communication is consolidated. Standards are enforced. The operation remains coherent because there is a single entity accountable for the result.

This single point of accountability is the mechanism that eliminates the Coordination Tax. It is the structural advantage of our model.

From Reaction to Advantage: Intelligence-Led Validation.

Traditional protection is reactive. Modern protection requires situational advantage. Our global posture emphasizes pre-arrival validation and environment readiness to reduce uncertainty early.

We coordinate the protective environment *ahead of movement* so that the client arrives into a controlled condition. Locations are deliberately selected. Agendas are validated. Local elements are aligned to our standards.

We do not run protection as improvisation; we run it as an engineered operating condition.

The Invisible Layer: Integrating Modern Technical Safeguards

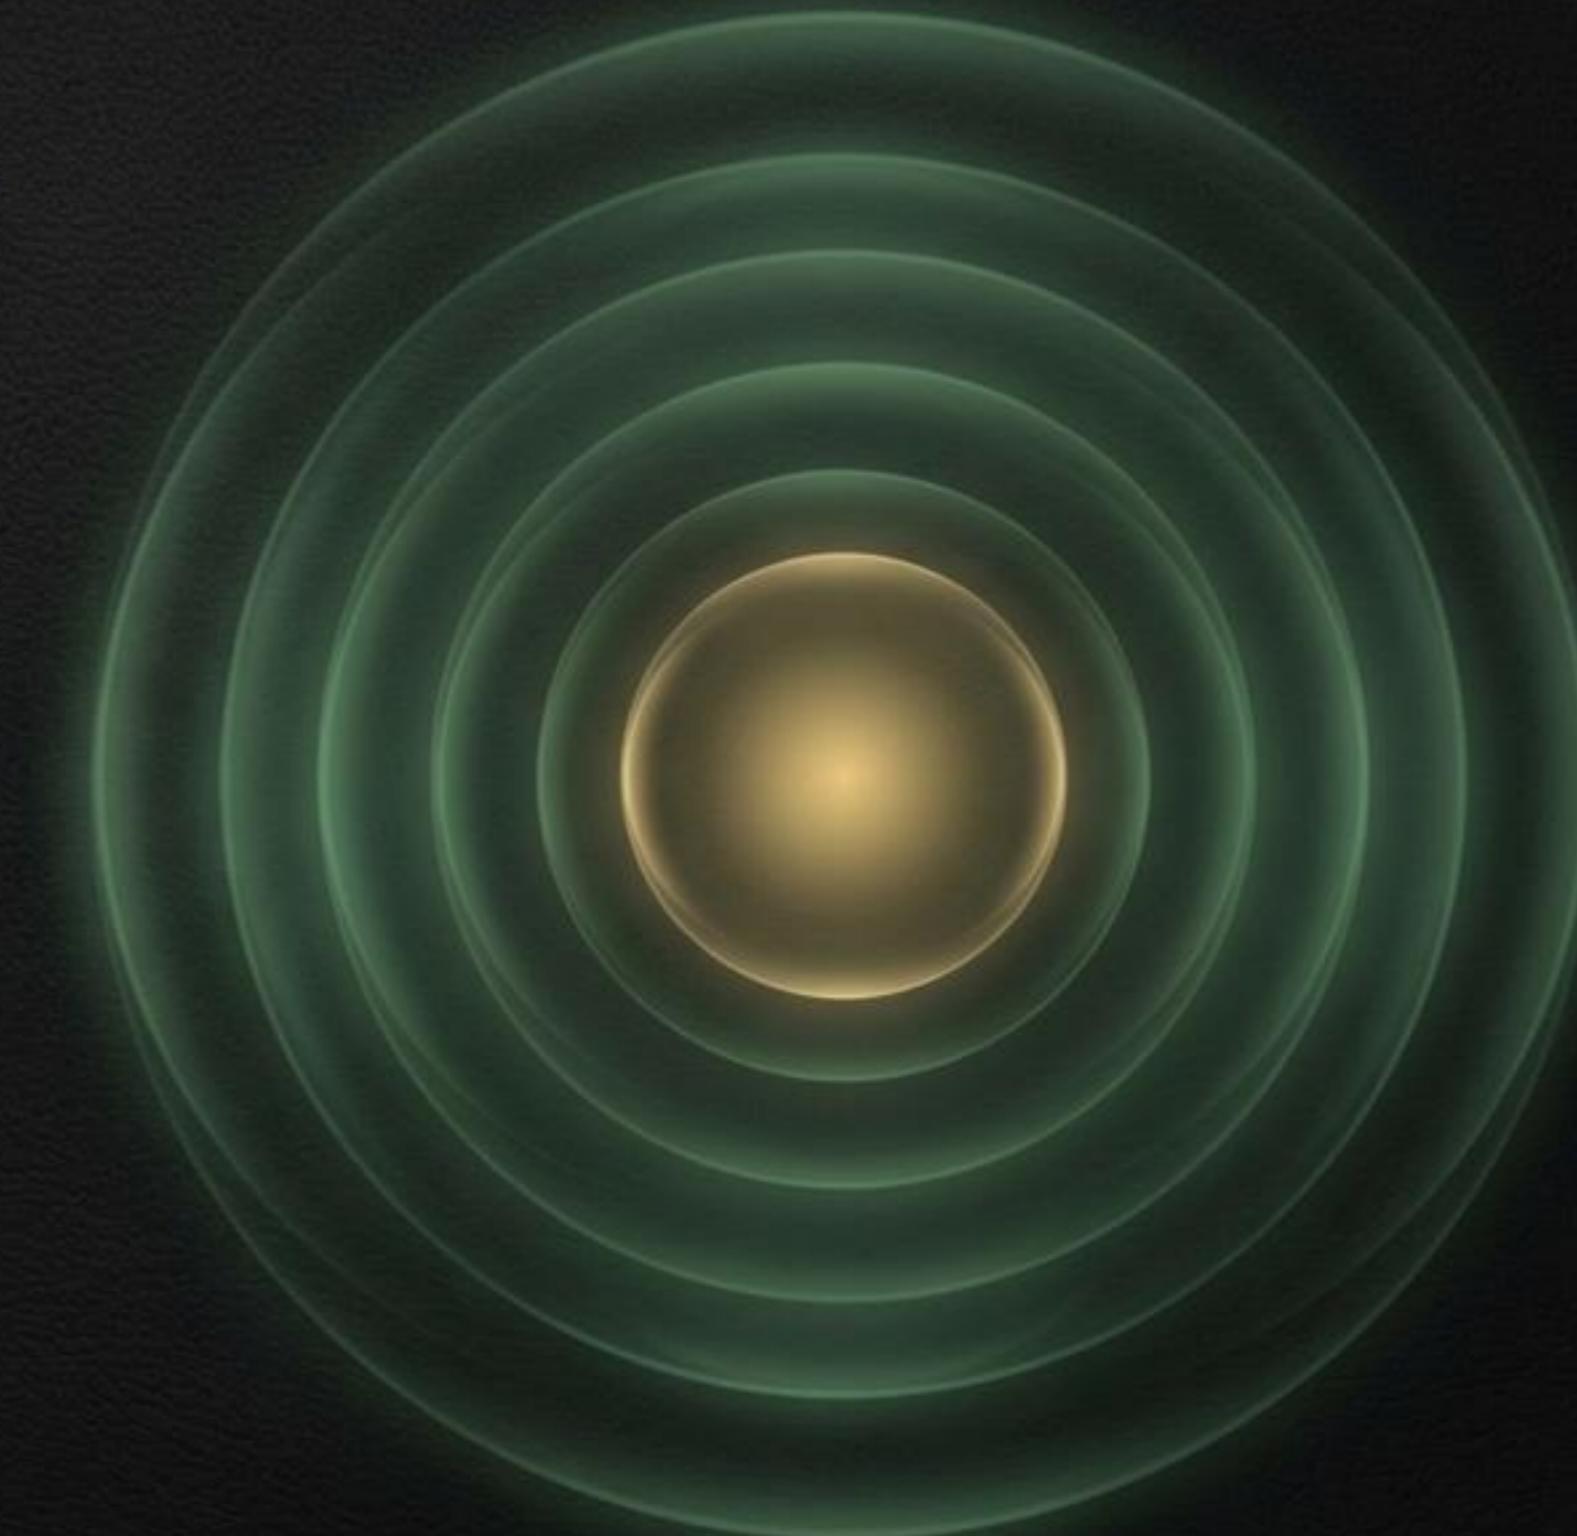

Many firms can provide physical coverage. Few can manage the technical reality of modern exposure.

GreenJay integrates electronic and technical expertise into the protective environment, addressing the risks that physical protection cannot.

This layer works quietly in the background to:

- Reduce avoidable digital exposure.
- Strengthen communications integrity.
- Enhance operational coordination and clarity.
- Support continuity of situational awareness.

The principal's experience remains premium and uninterrupted. The program simply becomes more resilient.

Cormorant Garamond: The GreenJay Experience: Calm, Coherent, and Discreet.

The outcome of a well-governed system is a fundamentally different experience. It is the absence of friction and the presence of calm confidence. The best protection is rarely the loudest. It is the most coordinated. It is the program where the client rarely needs to ask, "Are we good?" because the environment is already governed. This is the standard we deliver, regardless of geography.

In Practice: Secure Mobility Without Theatrics.

Movement is where most global programs become visible. A heavy posture draws attention; a sloppy posture invites risk. A refined posture looks like normal life while preserving control.

Our model emphasizes secure mobility that remains discreet. This includes sourcing appropriate low-visibility vehicles, vetting professional drivers, and managing transitions quietly. The objective is not theatrics; it is consistency and control, reducing friction and exposure at every point.

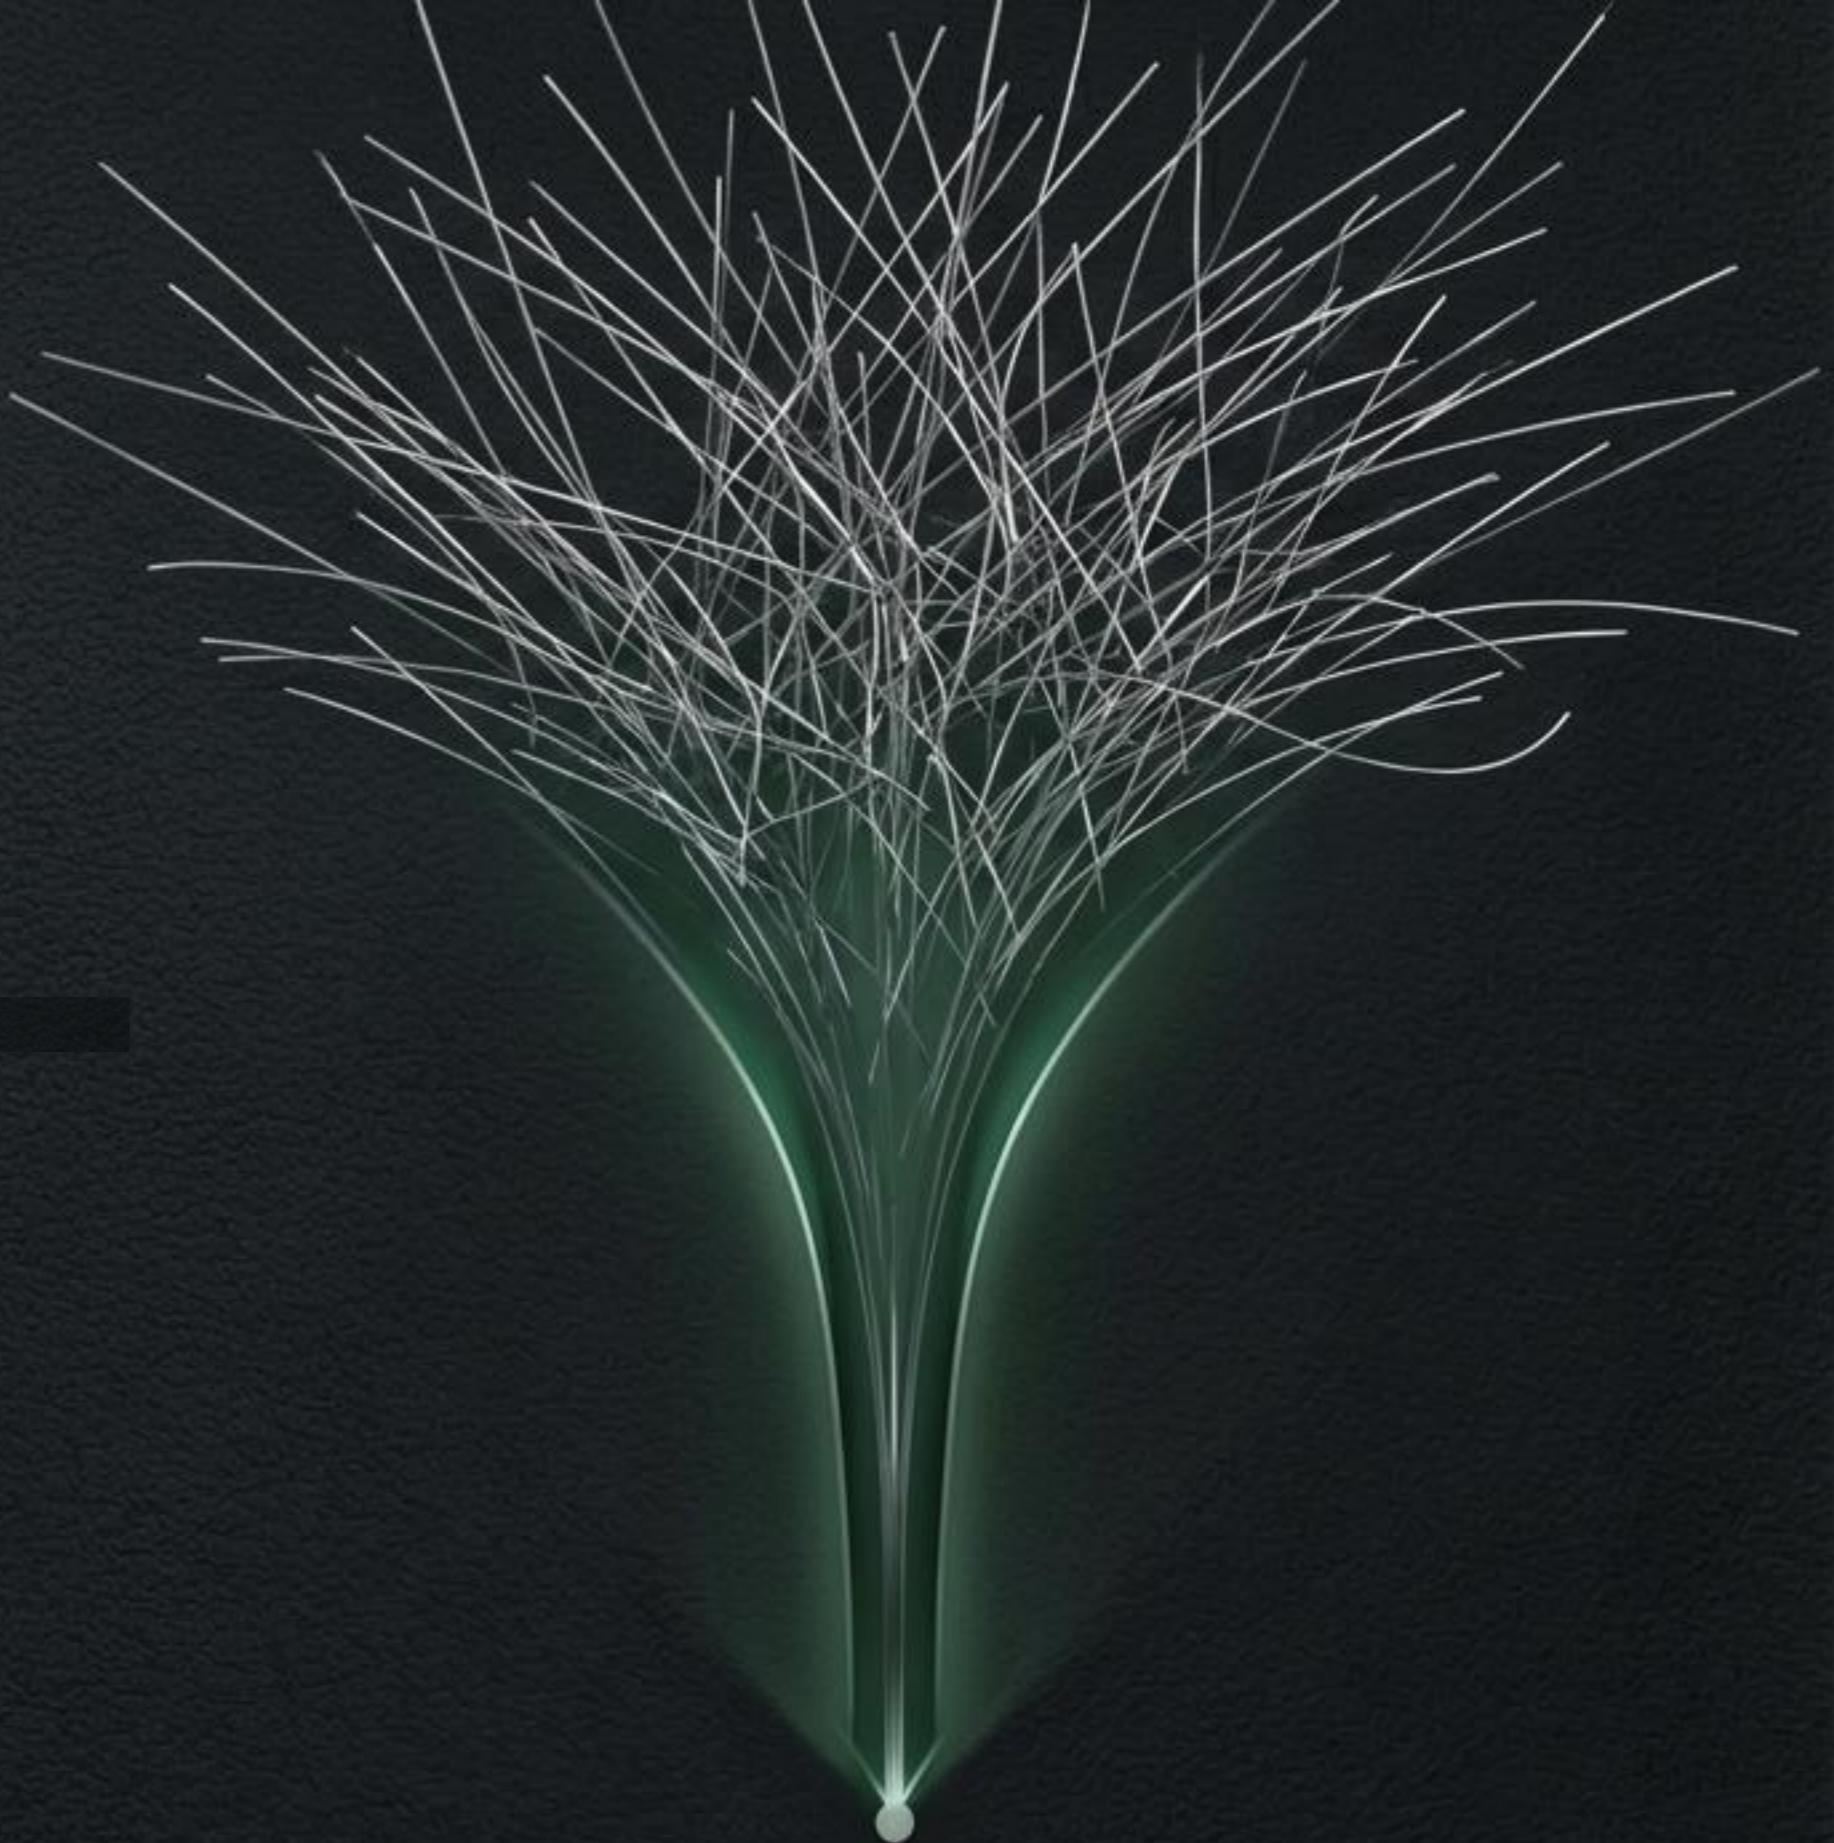

Privacy is a Protective Asset.

In global travel, privacy can be compromised by a single careless disclosure. We treat information with discipline because privacy is not a preference; it is a protective measure. Our operating standard is designed to preserve it:

- We limit unnecessary disclosure of names, locations, and schedules.
- Vendors receive only what they must know to execute.
- We consolidate coordination to prevent uncontrolled communication sprawl.

This protects the client from pattern-of-life exposure and ensures security never becomes a spectacle.

Global Capability: A Governed Standard, Not a Passport Stamp.

GreenJay's presence in key regions like Brazil and the Dominican Republic reflects our strategy: build and govern trusted partner ecosystems where UHNW clients travel and invest.

Why Latin America is a Proving Ground: This region includes world-class physical security professionals. What is often missing is the integrated technical layer and command-and-control discipline that modern UHNW protection requires. GreenJay's value is bringing this missing layer, closing the capability gap. We elevate local partners, integrating their physical expertise into our global standard of governance.

This is the proof of our model: the ability to deliver the same discreet, high-performance operating condition in multiple jurisdictions with minimal client burden.

Our Restraint is Proof of Our Seriousness.

This document outlines our principles and philosophy. We do not publish tactics, procedures, or operational details. A protection firm that shares its playbook publicly does not understand discretion. Our commitment to client privacy begins with our own. The sensitive details of how we achieve our results are reserved for the clients we serve.

The Next Step: A Confidential Briefing.

The appropriate next step is a confidential briefing where your requirements, lifestyle, and regional considerations can be discussed privately.

From there, we can scope an engagement that integrates the best local physical capability with GreenJay's governance, technical integration, and operational leadership.

Global protection should not feel like a project. It should feel like a standard.
